Software Developer & Technology Specialist

Adaptable professional with experience across software development, data management, and customer-facing roles. Fluent in English and Spanish, with a proven ability to work in technical and administrative environments. Combines hands-on experience in software development, data entry, and team coordination with certified expertise in AI. Quick learner, highly organized, and comfortable taking on diverse responsibilities within any team or organizational setting.

Skills

- Data entry & administrative support
- Team coordination & project support
- AI & generative AI application development
- Customer service & client communication
- API integration & database design
- Bilingual: English (fluent) & Spanish (native)

Experience

Data Entry Specialist

2025 – 2026

Springboard

- Processed 500+ records daily across internal systems, maintaining 99%+ data accuracy and consistency.
- Audited and corrected records for accuracy, identifying discrepancies that reduced error rates and supported operational efficiency.
- Partnered with cross-functional teams to streamline information flow, consistently delivering tasks on schedule in a fast-paced environment.

Freelance Software Developer

2025 – Present

Self-employed

- Built AI-powered chatbots and generative AI applications using Python and Flask, integrating with external APIs for real-world clients.
- Architected a custom case management system for a law firm, cutting case processing time by 30% and improving team workflow.
- Designed and deployed 5+ responsive websites for clients, increasing online visibility and driving measurable growth in user engagement.
